

For the scenario below identify the entities, their attributes and appropriate keys

## The Angel Warehouse

The Angel Warehouse stores items for its parent company. The warehouse is organised into **bays**, which are storage areas, but the items themselves are stored in **bins**. Each bay contains a number of **bins**. Each bay is identified by a **unique bay number** and the **bay location** and the **height of the bay** are recorded. Each bin has a **different number within the bay**, always starting with **bin no. 1**, and while some bays have only 5 bins some have over 50. The **size of each bin** is recorded.

Some bays have a parking spot for one **fork lift** to help move items round the warehouse and lift items into bins. Each fork lift is allocated to a bay. Each **fork lift has a unique equipment number** and the **maximum carrying weight of the fork lift needs to be known**. Some fork lifts are **petrol driven** while some are electric.

For all **bins** the maximum loaded weight must be known.

When an **item** is taken into the warehouse it is assigned a **unique number** and the **date is recorded as well as the item weight**. Bins can store a number of items and when an item is put in a particular bin this **date is also recorded**. Items can be moved back and forth between bays and bins to optimise the warehouse storage.
